

AMENITY BARK

This bark mulch is produced from British mixed conifer barks and is intended for wide range of professional landscape projects and has a long effective service life of over 2 years.

Amenity Bark is ideal for:

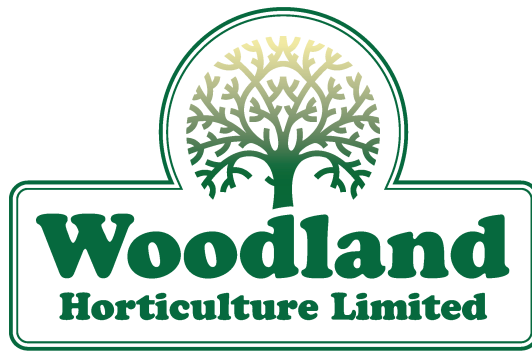

- Mulching large areas of ground
- Easy to handle
- Dark brown in colour
- Particles in the range of 5 to 75mm
- Completely peat free
- Naturally acidic
- Long effective service life of at least two years
- Fire resistant, tested in accordance with BS 4790:1987 which makes spruce ornamental useful in areas of potential fire risk such as car parks, areas adjacent to pedestrian walkways etc.
- Produced from natural, sustainably produced mixed conifer bark, certified by the Forest Stewardship Council (FSC)
- Provides a hostile environment for pests
- Easy to lay and install, using simple tools and requiring little subsequent maintenance
- Allows clean access onto mulched areas for plant pruning, dead heading etc.

An additional 10% to 15% of material should be allowed to compensate for settlement.

Topping up of mulch will be required from time to time. Use material of the same grade and source to provide continuity of appearance.

Amenity bark can be delivered in loose bulk loads or bulk bags.

For Domestic Use: One cubic metre bulk bags of Amenity Bark will cover 13 square metres to a depth of 75mm. Available for delivery on one pallet.

BARK NUGGETS

A long lasting, versatile, high performance mulch. This product is a blend of Douglas fir, larch and pine, all from British forests. It is intended for high class domestic landscape projects and has a long effective service life of over 4 years. Ideal for use in areas exposed to high winds.

Bark Nuggets are:

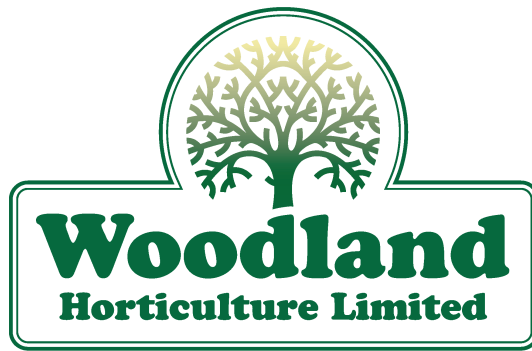

- Good for domestic use at home on flower and vegetable beds and on planters.
- Free flowing and easy to handle
- Very attractive visual appearance.
- Rich reddish brown in colour.
- Completely peat free.
- Naturally acidic.
- Particles in the range of 15 to 65mm.
- Long effective service life of at least two years.
- Fire resistant, tested in accordance with BS 47901987 which makes spruce ornamental useful in areas of potential fire risk such as car parks, areas adjacent to pedestrian walkways etc.
- Produced from natural, sustainably produced pine, douglas fir and larch bark, certified by the Forest Stewardship Council (FSC).
- Provides a hostile environment for pests.
- Slowly improves the organic content of the soil as it decomposes.
- Easy to lay and install, using simple tools and requiring little subsequent maintenance.
- Allows clean access onto mulched areas for plant pruning, dead heading etc.

An additional 5% of material should be allowed to compensate for settlement.

Topping up of mulch will be required from time to time. Use material of the same grade and source to provide continuity of appearance.

Bark Nuggets can be delivered in loose bulk loads, bulk bags or in 75 litre bags.

For Domestic Use: 42 x 75 litre bags of Bark Nuggets will cover 42 square metres to a depth of 75mm. Available for delivery on one pallet.

CONTRACT GRADE BARK MULCH

This bark mulch is produced from British mixed conifer barks and is intended for wide range of landscape projects where economy is an important factor and has an effective service life of over one years.

Contract Grade Bark Mulch is ideal for:

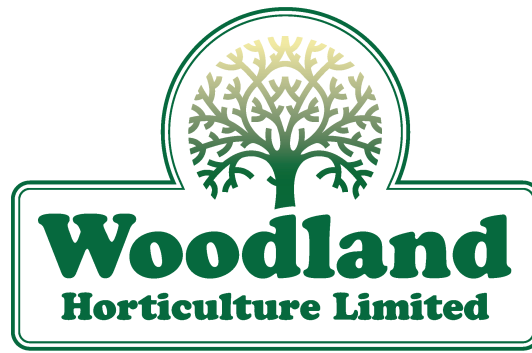

- Landscape applications.
- Free flowing and easy to handle
- Mid to Dark Brown in colour
- Particles in the range of 1 to 65mm
- Completely peat free
- Naturally acidic
- Long effective service life of at least one year
- Produced from natural, sustainably produced mixed conifer bark, certified by the Forest Stewardship Council (FSC)
- Provides a hostile environment for pests
- Easy to lay and install, using simple tools and requiring little subsequent maintenance
- Allows clean access onto mulched areas for plant pruning, dead heading etc.

An additional 10% to 15% of material should be allowed to compensate for settlement.

Topping up of mulch will be required from time to time. Use material of the same grade and source to provide continuity of appearance.

Contract Bark Mulch can be delivered in loose bulk loads or bulk bags..

For Domestic Use: One cubic metre bulk bags of Amenity Bark will cover 13 square metres to a depth of 75mm. Available for delivery on one pallet.

BARK MULCH & WOODCHIP

Mulching is the process of spreading a material around plants to protect and improve the area of soil covered.

The main benefits of mulching are:-

- Inhibits weed growth, any weeds that do grow can easily be removed
- Reduces water loss by evaporation
- Helps maintain a more even temperature. Mulches keep soil cooler in summer and warmer in winter
- Reduces soil erosion in intense weather conditions, such as heavy rain
- Organic mulches will improve soil structure, as they decay over time, adding nutrients to the soil
- Aesthetically pleasing. A good quality pine bark mulch greatly enhances the appearance of a planting scheme

When and how often to mulch

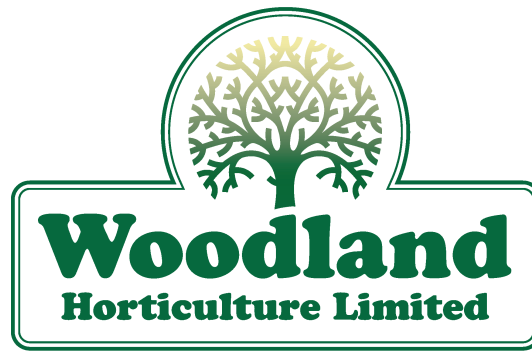

The best time to mulch new plantings is immediately after planting. In the case of established plants, mulch is best applied in early Spring. Plants are beginning to grow and weeds seeds have not yet germinated. As a frost protection measure, mulching should be carried out in the autumn, especially on new plantings of delicate shrubs. Bark will give a service life, typically two to four years depending on type of bark and particle size. As plants grow and fill in the bed areas, less and less mulch is needed.

How to apply mulch

Before applying mulch the area should be weeded.

Spread a layer of the selected mulching material over the entire planting area. It should be applied between 50mm and 75mm deep. Leave the area immediately around the stems of woody plants, about 50mm, this prevents decay caused by wet mulch during the Winter. Keep mulch 150mm to 300mm from the walls of buildings.

Newly planted trees require a circle of mulch 1 to 1.3metres in diameter.

PINE MINI MULCH

A neat, small chip, high performance mulch, suitable for a wide range of mulching applications, typically on smaller beds and borders or on tubs, planters, window boxes and roof gardens. This product contains only Scots Pine from British forests.

Pine Mini Mulch is:

- Very attractive appearance
- Free flowing and easy to handle
- Rich mid-brown in colour
- Completely peat free
- Naturally acidic
- Particles in the range of 3 to 18mm
- Long effective service life of at least two years
- Produced from natural, sustainably produced pine bark, certified by the Forest Stewardship Council (FSC)
- Provides a hostile environ for pests
- Slowly improves the organic content of the soil as it decomposes
- Easy to lay and install, using simple tools and requiring little subsequent maintenance
- Allows clean access onto mulched areas for plant pruning, dead heading etc.

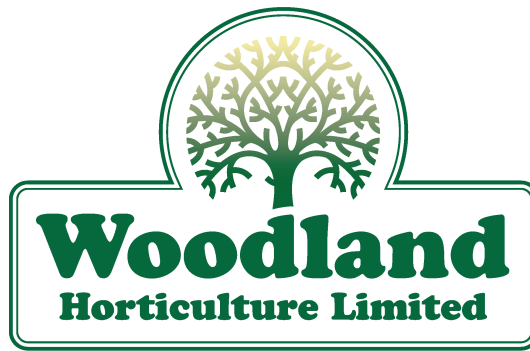

An additional 5% of material should be allowed to compensate for settlement.

Topping up of mulch will be required from time to time. Use material of the same grade and source to provide continuity of appearance.

Pine mini mulch remains a free flowing material. When used in tubs, containers etc ensure that there is sufficient depth of rim to contain mulch
